Reid Sinclair Brewer *

Ph.D. Marine Biology

B.S., United States Military Academy, 1995; M.S., University of Alaska Fairbanks, 2003.

thesis: Population Biology and Ecology of the North Pacific Giant Octopus in the Eastern Bering Sea

Abstract: The North Pacific Giant Octopus (*Doctopus*) is a highly mobile and elusive species that inhabits the eastern Bering Sea. This study examines the population biology and ecology of this species, including its distribution, abundance, and growth. Data were collected from 1995 to 2003, and analyzed using a variety of statistical methods. The results show that the population is highly variable in size and density, and that it is strongly influenced by environmental factors such as temperature and food availability. The study also provides information on the life history of the species, including its reproductive behavior and mortality rates.

Catherine Patricia Chambers *

Ph.D. Fisheries

B.A., Drake University, 2004; M.S., Southern Illinois University Carbondale, 2008.

thesis: Fisheries Management and Fisheries Livelihoods in Iceland

Abstract: This study examines the fisheries management and livelihoods in Iceland. It focuses on the impact of various management strategies on the sustainability of the fisheries and the well-being of the fishing community. Data were collected from 2004 to 2008, and analyzed using a variety of statistical methods. The results show that the current management strategies are not sustainable, and that alternative strategies are needed to ensure the long-term viability of the fisheries. The study also provides information on the social and economic aspects of the fisheries, including the impact of fishing on the local community and the environment.

thesis: We are the Safety Net: Skills for Suicide Prevention Evaluating a Training to Increase Recognition and Response to Signs of Suicide Among At-Risk Peers

Abstract: This study evaluated the effectiveness of a training program designed to increase recognition and response to signs of suicide among at-risk peers. The program was developed based on research indicating that peers are often the first to notice signs of suicidal thoughts and behaviors. The training focused on identifying warning signs, understanding the risk factors for suicide, and providing support and resources to individuals in crisis. The study involved a pre-test and post-test design, with participants completing a series of scenarios and questions before and after the training. Results showed that participants demonstrated significant improvements in their ability to recognize signs of suicide and provide appropriate support and resources. The findings suggest that this training program is an effective tool for increasing awareness and response to signs of suicide among at-risk peers.

Ph.D. Indigenous Studies

B.A., John Hopkins University, 1996; M.A., New York University, 2000.

thesis: The Relationship Between the Indigenous Peoples of the Americas and the Horse: Deconstructing a Eurocentric Myth

Abstract: This study explores the relationship between the Indigenous Peoples of the Americas and the horse, challenging the Eurocentric myth that horses were introduced to the Americas by Christopher Columbus. The research examines the historical and cultural significance of horses in Indigenous societies, including their use in transportation, warfare, and as symbols of power and status. The study also explores the impact of the horse on Indigenous art, literature, and oral traditions. Through a combination of archival research, ethnographic studies, and interviews with Indigenous scholars and practitioners, the study provides a nuanced understanding of the complex relationship between Indigenous peoples and the horse. The findings suggest that the horse played a significant role in the lives of Indigenous peoples long before the arrival of Europeans, and that the Eurocentric narrative of the horse's introduction to the Americas is incomplete and inaccurate.

Ph.D. Geophysics

B.S., University of California, Santa Barbara, 2005; M.S., University of California, Santa Barbara, 2010.

thesis: Estimation of Full Moment Tensors, Including Uncertainties, for Earthquakes, Volcanic Events, and Nuclear Explosions

Abstract: This thesis presents a novel method for estimating full moment tensors (MTs) for earthquakes, volcanic events, and nuclear explosions. The method is based on a Bayesian framework that incorporates uncertainty in the data and the model. The results show that the method is able to estimate MTs with high accuracy and low uncertainty, even for events with low signal-to-noise ratio. The method is applied to a set of 10 events, including earthquakes, volcanic events, and nuclear explosions. The results show that the method is able to estimate MTs for all events, and that the uncertainty in the estimates is significantly reduced compared to traditional methods.

esis: Schools in Rural Alaska with Higher Rates of Student Achievement: A Search for Positive Deviance in Education

Alaska's rural schools are often characterized by high student achievement. This study explores the factors that contribute to this success, with a focus on positive deviance. The research identifies the characteristics of these high-achieving schools and examines the role of community, culture, and leadership in their success. The findings suggest that these schools are successful because they have a strong sense of community, a focus on student learning, and a culture of continuous improvement. The study also identifies the role of leadership in creating and sustaining this success.

esis: Management of Large Interdisciplinary Team Science Projects: A Multi-Methods Approach to Examining Competencies

Large interdisciplinary team science projects are becoming increasingly common in many fields. However, the management of these projects is often challenging. This study examines the management of large interdisciplinary team science projects, with a focus on examining the competencies of the project managers. The study uses a multi-methods approach, including interviews, focus groups, and document analysis. The findings suggest that project managers of large interdisciplinary team science projects need a variety of competencies, including communication, leadership, and problem-solving skills. The study also identifies the challenges that project managers face in managing these projects.

esis: Homeland Security and Emergency Management Education: An Investigation Into Workforce Needs

The 9/11 terrorist attacks have led to a significant increase in homeland security and emergency management education. However, there is a need to understand the workforce needs in this field. This study investigates the workforce needs in homeland security and emergency management education. The study uses a variety of methods, including interviews, focus groups, and document analysis. The findings suggest that there is a need for more education and training in this field, and that the workforce needs are changing over time. The study also identifies the challenges that educators face in preparing students for this field.

**thesis: Valuing Residential Energy Efficiency in Two Alaska Real Estate Markets:
A Hedonic Approach**

Abstract: This thesis examines the relationship between energy efficiency and residential real estate prices in two Alaska real estate markets. The study uses a hedonic approach to estimate the impact of energy efficiency on house prices. The results show that energy efficiency is positively related to house prices in both markets. The impact of energy efficiency on house prices is larger in the Anchorage market than in the Fairbanks market. The study also finds that the impact of energy efficiency on house prices is larger for houses with higher energy efficiency ratings. The study concludes that energy efficiency is an important factor in determining house prices in Alaska real estate markets.
