is dissertation used an interdisciplinary approach with mapping, interviews and analyses to examine fishing patterns of halibut fishers in Alaska. This work looks at variability in perceived trends in abundance and size among fishers with different experiences and highlights the need to include diverse stakeholders in fisheries management.

is research developed advanced techniques for the correction of ionospheric distortions in spaceborne radar observations. In addition to developing robust algorithms, the dissertation demonstrates that the proposed technology can substantially improve glacier-velocity and permafrost-deformation measurements derived from spaceborne radar data.

D. Source mechanisms and uncertainties are estimated to understand the tectonics of Southcentral Alaska. Radiated seismic waves from earthquake sources are simulated within a three-dimensional velocity model of Alaska to investigate the effects of topography, subducting Pacific slab and major sedimentary basins.
