Projects

Projects provide an opportunity to connect the knowledge and techniques learned in this course to a real-world problem. Each student will be assigned a project and will be expected to complete it. The project will be presented during the course and will be discussed in class with reasonable frequency.

Project 1: Data Analysis

Work towards completing the first version of the Data Analysis Project. This project involves analyzing a dataset and identifying trends and patterns. The project will be presented during the course and will be discussed in class with reasonable frequency.
